Amendment to the Claims:

The listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

Claims 1-14. Cancelled (Without disclaimer or prejudice).

15. (New) A method for downloading adaptation data from a server to a portable radio communication device, said method comprising:

providing electronic content for storage on a memory of said portable radio communication device;

providing said adaptation data on a memory of said server;

allowing access to said adaptation data on said server for downloading from said memory of said server to said portable radio communication device;

downloading said adaptation data from said memory of said server to said portable radio communication device;

monitoring downloading of said adaptation data by said portable radio communication device from said memory of said server to provide output data;

applying said adaptation data to said electronic content so as to modify said electronic content to provide adapted electronic content;

generating data based on the output data of said monitoring downloading of said adaptation data; and

computing remuneration data related to the electronic content and the adaption data based on the generated data.

16. (New) A method according to claim 15, wherein:

a content provider provides said electronic content for storage on the memory of said portable radio communication device;

the content provider provides said adaptation data for storing on the memory of said server;

a content enabler allows access to said adaptation data for downloading from said memory of said server to said portable radio communication device; and

the content enabler provides for monitoring downloading of said adaptation data by said portable radio communication device from the server, generating data based on monitoring downloading of said content, and computing the remuneration data based on the generated data, the content enabler determining payment data for said content provider based on said remuneration data.

17. (New) A method according to claim 15, wherein the electronic content comprises original games content and the adaptation data comprises supplementary software for modifying the original games content.

18. (New) A system for downloading adaptation data from a server to a portable radio communication device, the portable radio communication device operating in a radio communication network and the server being located relative to the network, the system comprising:

a memory of said portable radio communication device storing electronic content;

a memory of said server storing said adaptation data;

access means for allowing access to said adaptation data stored on said server for downloading from said memory of said server to said portable radio communication device;

downloading means for downloading said adaptation data from said memory of said server to said portable radio communication device;

monitoring means for monitoring downloading of said adaptation data by said portable radio communication device from said memory of said server to provide output data;

processor means for applying said adaptation data to said electronic content so as to modify said electronic content to provide adapted electronic content;

data generation means for generating data based on the output data of said monitoring means; and

computing means for computing remuneration data based on the generated data.

19. (New) A system according to Claim 18, wherein:

a content provider provides said electronic content for storage on the memory of said portable radio communication device;

the content provider provides said adaptation data for storing on the memory of said server;

a content enabler allows access to said adaptation data for downloading from said memory of said server to said portable radio communication device;

the content enabler provides the monitoring means, the data generation means and the computing means; and

the content enables providing payment determination means for determining payment data for said content provider based on said remuneration data.

20. (New) A system according claim 18, wherein the electronic content comprises original games content and the adaptation data comprises supplementary software for modifying the original games content.

21. (New) A portable radio communication device operable in a radio communication network including a server, the portable radio communication device being capable of downloading adaptation data from the server, the portable radio communication device having a transceiver, a memory and a controller, wherein:

the memory stores electronic content;

the controller is operable to control the transceiver to transmit a request for adaptation data from the server, the request comprising an identifier of the electronic content stored on the device and security data, the identifier and the security data enabling the server to download the adaptation data to the portable radio communication device, the transceiver receives said adaptation data from the server, and the controller modifies the electronic content stored on the memory by applying to the electronic content the received adaptation data to provide adapted data which is stored on said memory;

the transceiver in response to said storing of the adaptation data transmits an acceptance signal; and

said acceptance signal is used by the server for computing remuneration data related to the adaptation data.

22. (New) A server arranged for communication with a portable radio communication device for downloading adaptation data onto said device,

the server comprising:

a memory for storing said adaptation data;

access means for allowing access to said adaptation data stored on said server for downloading from said memory of said server to said portable radio communication device;

an interface for responding to downloading means for downloading said adaptation data from said memory of said server to said portable radio communication device;

monitoring means for monitoring the downloading of said adaptation data from said server to provide output data;

data generation means for generating data based on the output data of said monitoring means; and

computing means for computing remuneration data related to the adaption data and based on the generated data.
